DETAILED ACTION

Applicant traversed the restriction requirement. Applicant's arguments regarding independence and patentable distinctness are not persuasive because the requirement was made under Lack of Unity (PCT Rule 13.1). Applicant argues that all the claims depend directly or indirectly from claim 1, therefore, they possess unity of invention. This argument is also unpersuasive. However, a review of the reference that was cited for demonstrating Lack of Unity appears to be deficient for establishing that a prolactin variant with a mutation at site 1 and site 2 was disclosed. Therefore, in order to afford Applicant every opportunity to make an informed election, a new restriction is set forth below.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9 and 12 in so far as it encompasses methods of using the protein, drawn to prolactin variant and methods of making and using said variant.

Group II, claim(s) 10, drawn to a transgenic animal.

Group III, claim(s) 11, drawn to a therapeutic composition comprising a nucleic acid molecule.

Group IV, claim(s) 12, in so far as it encompasses methods of using a nucleic acid , drawn to methods of using a nucleic acid.

Art Unit: 1647

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of claim 1 is the prolactin variant having a mutation at site 1 and a mutation at site 2. Therefore, claims 1-9 and 12 (in part) have unity of invention because they are directed to methods of making the variant of claim 1 and methods of using the variant of claim 1. The invention of Group II lacks unity of invention with Group I because it is not directed to a method of making or using the variant of claim 1. The invention of Group III lacks unity of invention with Group I because it is not directed to a method of making or using the variant of claim 1. The invention of Group IV lacks unity of invention with Group I because it is not directed to a method of making or using the variant of claim 1.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Art Unit: 1647

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
